# Solvers Principles and Architecture (SPA) 

## General Introduction

Master Sciences Informatique (Sif) September 18th, 2019

Rennes

Khalil Ghorbal<br>khalil.ghorbal@inria.fr

What makes a problem important?

## Before understanding Solvers

What makes a problem important ?

## Before understanding Solvers

## We need to talk about Problems

## What makes a problem important?

Abstraction of problems arising from important applications.

## What makes a problem important?

Abstraction of problems arising from important applications.
When asked how old she was, Suzie replied, 'In 2 years I will be twice as old as I was 5 years ago." How old is she?

## What makes a problem important?

Abstraction of problems arising from important applications.
When asked how old she was, Suzie replied, 'In 2 years I will be twice as old as I was 5 years ago." How old is she?

$$
\begin{aligned}
& x+2=2(x-5) \\
& \rightarrow x=12
\end{aligned}
$$

## What makes a problem important?

Abstraction of problems arising from important applications.
When asked how old she was, Suzie replied, "In 2 years I will be twice as old as I was 5 years ago." How old is she?

$$
\begin{aligned}
& x+2=2(x-5) \\
& \rightarrow x=12
\end{aligned}
$$

## Travelling Salesman Problem

Given a list of cities and the distances between each pair of cities, what is the shortest possible route that visits each city exactly once and returns to the origin city?

What makes a problem important?

Reduction of other problems.

$$
\left(\begin{array}{c}
\text { Problem } 1 \\
\vdots \\
\text { ProblemN }
\end{array}\right) \rightsquigarrow \text { ProblemA }
$$

- The transformation (reduction) may be non-trivial to find
- Needs to be "simpler" than solving the new problem

What makes a problem important?

Reduction of other problems.

$$
\left(\begin{array}{c}
\text { Problem } 1 \\
\vdots \\
\text { ProblemN }
\end{array}\right) \rightsquigarrow \text { ProblemA }
$$

- The transformation (reduction) may be non-trivial to find
- Needs to be "simpler" than solving the new problem

## What makes a problem important?

Reduction of other problems.

$$
\left(\begin{array}{c}
\text { Problem } 1 \\

\text { ProblemN }
\end{array}\right) \rightsquigarrow \text { ProblemA }
$$

- The transformation (reduction) may be non-trivial to find
- Needs to be "simpler" than solving the new problem

# What makes a problem important? 

Reduction example

## Satisfiability

Given a set $V$ of Boolean variables and a collection $C$ of clauses over $V$, is there a satisfying truth assignment for $C$ ?

Quadratic Diophantine Equations
Given positive integers $a, b$, and $c$, are there positive integers $x$ and $y$ such that $a x^{2}+b y^{2}=c$ ? (Transformation from 3SAT [Manders and Adleman 1978].)

# What makes a problem important? 

Reduction example

## Satisfiability

## Quadratic Diophantine Equations

Given positive integers $a, b$, and $c$, are there positive integers $x$ and $y$ such that $a x^{2}+b y^{2}=c$ ? (Transformation from 3SAT [Manders and Adleman 1978].)

What makes a problem important?

Poincaré said so!

- Its long resistance (beyond the current state-of-the art methods)
- Requires new insights (connections, perspectives) to get solved
- Example: Hilbert's famous list pf problems (1900)
- Example: Millennium Prize Problems

Riemann Hypothesis
All the non-trivial zeros of the Riemann zeta function have their real part equal to $\frac{1}{2}$.

All the non-trivial zeros of the Riemann zeta function have their real part equal to $\frac{1}{2}$.

## Outline

(1) What Makes a Problem Important?
(2) Important Problems
(3) Solving in Mathematics
(4) Solving Computer Science
(5) In This Course

## Important Problems You Must Be Aware Of

## Satisfiability (DPLL algorithm)

Is there a Boolean assignment that satisfies

$$
\left(v_{1} \vee \bar{v}_{2}\right) \wedge\left(\bar{v}_{1} \vee v_{2}\right)
$$

Quantifier Elimination (Cylindrical Algebraic Decomposition) Is the following sentence true over the reals

$$
\forall a, b \cdot \exists x . \quad x^{2}+a x+b=0
$$

## Important Problems You Must Be Aware Of

## Satisfiability (DPLL algorithm)

Is there a Boolean assignment that satisfies

$$
\left(v_{1} \vee \bar{v}_{2}\right) \wedge\left(\bar{v}_{1} \vee v_{2}\right)
$$

## Quantifier Elimination (Cylindrical Algebraic Decomposition)

Is the following sentence true over the reals

$$
\forall a, b \cdot \exists x . \quad x^{2}+a x+b=0
$$

## Important Problems You Must Be Aware Of

## Convex Optimization (SemiDefinite Programming)

$$
\begin{aligned}
\text { Min } / \operatorname{Max} & C \bullet X \\
\text { Subject to } & A_{i} \bullet X=b_{i}, \quad i=1, \ldots, m \\
& X \succeq 0
\end{aligned}
$$

## Important Problems You Must Be Aware Of

## Convex Optimization (SemiDefinite Programming)

$$
\begin{aligned}
\text { Min } / \operatorname{Max} & C \bullet X \\
\text { Subject to } & A_{i} \bullet X=b_{i}, \quad i=1, \ldots, m \\
& X \succeq 0
\end{aligned}
$$

Differential Equations (Numerical Algorithms)

$$
i \hbar \frac{\partial}{\partial t} \Psi(\mathbf{r}, t)=H \Psi(\mathbf{r}, t)
$$

## Solving Systems of Equations

Object of study in mathematics is the set of solutions of equations

$$
f(x)=0
$$

```
Nature and operators in f
- Linear (vector of) - Finite fields (\mathbb{Z}/p\mathbb{Z})
- Polynomial (vector of)
- With special operators:
derivations
```

```
- Finite fields \((\mathbb{Z} / p \mathbb{Z})\)

\section*{Outline}

\section*{(1) What Makes a Problem Important?}
(2) Important Problems
(3) Solving in Mathematics
(4) Solving Computer Science
(5) In This Course

\section*{Problem}

Definition
- Description of the parameters
- Statement of what an answer, or solution, is required to satisfy

Example: Traveling Salesman Problem
The problem consists of a finite set of locations/cities \(C=\left\{c_{1}, \ldots, c_{m}\right\}\) and for each pair of cities, \(c_{i}, c_{j} \in C\), the distance \(d\left(c_{i}, c_{j}\right)\) between them A solution is an ordering \(c_{\pi(1)}, c_{\pi(2)}, \ldots, c_{\pi(m)}\) that minimizes
\[
\left(\sum_{i=1}^{m-1} d\left(c_{\pi(i)}, c_{\pi(i+1)}\right)\right)+d\left(c_{\pi(m)}, c_{\pi(1)}\right)
\]

\]

\section*{Algorithm}

Step-by-step procedure to solve any instance of a given problem.

\section*{Efficiency}
- Time complexity (is not the only important parameter)
- How does the time needed to solve the problem evolve when the input length increases?
- Number of symbols in the description of the instance with respect to the encoding scheme for the problem.
- Alphabet \(\{c,[],, /, 0,1,2,3,4,5,6,7,8,9\}\)
- "c[1]c[2]c[3]c[4]//10/5/9//6/9//3" (32 symbols)

\section*{Algorithm}

Step-by-step procedure to solve any instance of a given problem.

\section*{Efficiency}
- Time complexity (is not the only important parameter)
- How does the time needed to solve the problem evolve when the input length increases?
- Number of symbols in the description of the instance with respect to the encoding scheme for the problem.

\section*{Example of input length}
- Alphabet \(\{c,[],, /, 0,1,2,3,4,5,6,7,8,9\}\)
- " \(c[1] c[2] c[3] c[4] / / 10 / 5 / 9 / / 6 / 9 / / 3 "\) (32 symbols)

\section*{Efficient Enough Algorithms}

Polynomial Time Complexity
Time complexity is \(O(p(n))\) for some polynomial \(p\) with input length \(n\).

\section*{Exponential Time Complexity}

Time complexity cannot be bounded by a polynomial (including \(n^{\log n}\) ).

\section*{Efficient Enough Algorithms}

\section*{Polynomial Time Complexity}

Time complexity is \(O(p(n))\) for some polynomial \(p\) with input length \(n\).

\section*{Exponential Time Complexity}

Time complexity cannot be bounded by a polynomial (including \(n^{\log n}\) ).
\begin{tabular}{c|ccc} 
& \(n=10\) & \(n=30\) & \(n=60\) \\
\hline\(n^{3}\) & 0.001 s & 0.027 s & 0.216 s \\
\(3^{n}\) & 0.059 s & 6.5 years & \(1.3 \times 10^{13}\) centuries
\end{tabular}

\section*{Solving in Computer Science}
- Undecidable (not solvable by any algorithm)
- Intractable (no polynomial time algorithm can possibly solve it)
- Complexity (worst case with respect to the input length)
- Target special cases
- Approximations (relaxations)
